DECIDUOUS TREES

Our Shade and Lawn Trees are well grown, transplanted specimens, dug with strong fibrous roots and should not be compared with untransplanted stock offered at lower prices.

We can usually supply larger sizes than those here quoted, for which special prices will be given on request.

Acer platanoides-Norway Maple

THE MAPLES

The Maples supply us with some of the most useful street and shade trees available for general planting. They are comparatively rapid in growth, symmetrical, and free from the ravages of many of the most destructive insect pests.

Per Per

of many of the most destructive insect pests.		Per

LARGE SPECIMEN SHADE TREES

We can furnish several varieties of shade trees in larger sizes than those catalogued.

PRICES ON APPLICATION.

THE POPLARS

The Poplars supply us with rapid growing trees in forms suitable for street, shade and screening purposes. Probably the best known variety is the Lombardy Poplar used so much for screening unsightly objects. For this purpose it should be set from 4 to 8 feet apart according to the density of screen required.

THE WILLOWS

The Willows prefer a damp situation, but are often found growing luxuriantly in comparatively dry soil. They make graceful trees when allowed to develop, but are much used for screening purposes where they stand severe pruning without injury. The Laurel Leaved Willow (S. pentandra) is the most valuable plant for coarse hedge purposes.

THE ELMS		

Here in New England many towns owe much of their beauty to the stately elms which border their streets. The American Elm is, of course, the best known, but the English Elm (U. Campestris) is being much used for street planting. Its foliage is somewhat smaller than that of our native variety and its habit of growth more spreading.

Massing of Spiraea Van Houttei

FLOWERING SHRUBS

When right selections are made, shrubs serve almost as well as evergreens to screen fences and other low, unsightly objects. Even in Winter they are attractive from the gracefulness and color of their stems and branches.

The following list comprises sorts which have been found of value in this climate. Most varieties may be planted with equal success in either Spring or Fall. In general, for massed effects, the dwarf and small-growing shrubs should be set 2½ feet apart; medium and large-growing, 3 to 5 feet apart.

Shrubs for Shady Places: Berberis, Ceanothus, Clethra, Cornus, Euonymus, Hamamelis, Ilex, Ligustrum, Lonicera, Rhodora, Ribes, Symphoricarpos, Viburnum, all Evergreen Shrubs.

Shrubs bearing bright-colored berries: Amelanchier (Red), Berberis (Red), Cornus (White), Eleagnus (Red), Euonymus (Red), Ilex (Red), Ligustrum (Black), Lonicera (Red or Yellow), Lycium (Red), Pyrus (Red or Black), Rhamnus (Black), Rhodotypus (Black), Rosa (Red), Sambucus (Red or Black), Symphoricarpos (White or Red), Viburnum (Black or Red).

THE AZALEAS

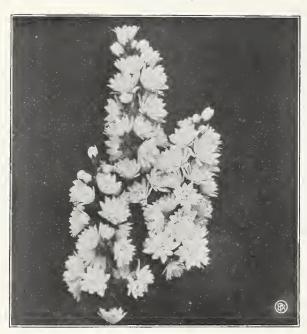

The Azalea holds a prominent place among the early spring flowering shrubs. While the European varieties have larger flowers, many of our hardy native sorts are fully as attractive. They prefer rich, fibrous soil protected from the sweep of cold winds in winter, and from full exposure to the sun in summer.

THE CORNELS OR DOGWOODS

The Dogwoods are attractive for their delicate blossoms in spring, the clusters of fruit in fall, and their bright colored bark in winter. They grow rapidly, reaching a height of 8 feet or more.

THE WEIGELIAS

These are free blooming old-fashioned shrubs without which no shrub planting is complete. Their color ranges from white to very dark red, with a variegated leaved variety, which is one of the best of that type of shrub.

THE FORSYTHIAS

The Forsythias are the earliest of our spring flowering shrubs, blooming in April before the leaves appear. They reach a height of 6 to 8 feet; some are upright and stiff in habit of growth, while others, F. Suspensa in particular, are drooping and graceful.

THE HYDRANGEAS

The hardy Hydrangeas are old favorites, and should be included in every shrub collection. They bloom late in the season. The heads of flowers remain until after cold weather sets in. They do well in dry soil; severe pruning is necessary if profusion of bloom is sought.

TRELLISES — SCREENS — LATTICE FENCES

Our completely equipped shop is engaged exclusively in the construction of articles of the above nature. While many of the simpler forms are carried in stock for immediate delivery, special attention is given to custom work from original designs. Let us submit estimates, through our Landscape Department, on any such requirements.

Philadelphus Coronarius - Mock Orange

THE HONEYSUCKLES

These grow to medium height, and do well in dry shady spots where many other flowering shrubs will not thrive. The blossoms are similar to those of the well known climbing form, and are followed by red berries.

THE SPIREAS

One of the most valuable classes of hardy shrubs. The best known is, of course. S. Van Houttei, which has superseded the old-fashioned Bridal Wreath in popular favor. S. Arguta is the earliest to bloom, followed by the feathery leaved S. Thunbergi. The dwarf growing S. Anthony Waterer blooms during the summer. S. opulifolia aurea is a tall rapid growing form with yellow foliage.

THE LILACS

Unless intended for a hedge, the Lilacs should be planted far enough apart so that they can develop naturally, under which conditions, they will bloom profusely from top to bottom. Especial attention should be called to the less common varieties, S. Josikaea and S. Persica. The former is late blooming, its foliage being plicated and leathery, not subject to dust and mildew as is the case with the Common Lilac. The Persian Lilac is a slender-growing shrub with a tendency to droop, especially when in bloom. Amongst the named hybrids many striking colors will be found.

THE SNOWBALLS

These hardy native shrubs supply us with some of our best planting material. They will grow in partial shade, and will stand exposure to cold winds. The best known are perhaps the Japanese Snowball (V. plicatum) and the Bush Cranberry (V. opulus), the latter bearing heavy clusters of bright red berries, somewhat resembling those of the Mountain Ash.

The Norway Spruce as a Hedge Plant

HEDGES AND SCREENS

A wide range of choice in hedging materials is possible, and selections should be made with a view to the ultimate height and density desired. For low hedges, which are to be closely sheared, Barberry and Privet are the usual choice, spacing the plants one foot apart. For taller hedges and screens, the Willows, Lilacs, and evergreens of various sorts are frequently used, spacing them three to four feet apart. Many of the flowering shrubs also form most attractive hedges and borders. For a screen of extreme height and rapid growth, the Lombardy Poplar is of course to be recommended, (See page 2.)

PLANT WHITE PINE FOR HEDGES AND WIND-BREAKS

The value of our native White Pine for Hedges, Screens and Wind Breaks is too often overlooked. It is a clean, hardy evergreen of quick growth, and will stand almost any amount of pruning. Young plants set one foot apart and kept trimmed will form a compact evergreen hedge. Just the thing for enclosing the clothes-yard, or for a division line between suburban estates. It makes a splendid back-ground for the perennial border. As a wind-break or screen it has no equal.

18 to 24 in. at \$25 per 100; 2 to 3 ft. at \$50 per 100; 3 to 4 ft. at \$100 per 100.

EVERGREENS

OTHING approaches in richness a properly arranged mass-planting of hardy evergreens. Many striking combinations of color, height, and varied foliage are possible; best of all, they are as effective in winter as in summer.

We carry many other varieties that are worthy of use in this locality; but the following are what we would recommend as most reliable for general planting.

THE FIRS			J. communis (Common Juniper) Eavar. depressa (Canadensis). The low-grow-	ach	Doz. 100
Abies balsamea. The "Fir Balsam" of the woods. Tall, slender growth, with dark, Each shining foliage, silvery underneath. Will thrive in cold, wet ground as well as in higher situations.	Per Doz.	Per 100	ing, grayish-green juniper found usually in our rocky New England pastures, but nev- ertheless a beautiful dwarf evergreen for ornamental planting, and one of the most hardy. 12 to 15 in		10.00

				NATIVE RHODODEN	IDRONS	

We strongly recommend the use of our native Rhododendrons. They are hardy, free flowering, and will survive our rigorous New England winters with much less loss than hybrid sorts heretofore so largely imported. Our source of supply is such that we can fill orders for any quantity of any size in bushy, well furnished plants. Favorable quotations can be made on carload lots delivered to any point in New England.

plants. Tavorable quotations can be made on e	arioaa	1003 401	1

ROSES OUT-OF-DOORS

OSE-GROWING is becoming more and more popular with flower-lovers, especially since the introduction of the wealth of new varieties which have been developed during the last decade, suitable for out-of-door culture in our rigorous climate. The best of the new, together with many of the old favorites are included in the carefully revised lists to be found in the following pages. The varieties are grouped according to the uses for which they are best fitted. Every sunny corner of the home grounds may well be occupied by some type of rose; it will surely respond liberally to even ordinary attention.

Most varieties can be supplied either dormant or in pots, the latter being intended for late spring and mid-

summer planting.

CULTURAL NOTES

Roses grown primarily for perfection of bloom, as is usually the case, require a warm and sunny, yet well ventilated studion, with rich soil and plenty of water at regular intervals. Proximity to overhanging trees or buildings should be avoided, as well as exposure to sweeping winds. The soil is best prepared to a depth of two feet or more, placing a layer of stones and gravel at the bottom of such an excavation for drainage, then filling in successively with sods and well-rotted manure, finishing to the level of the ground with rich, friable loam. Roses are gross feeders, but preparation because the plants of the level of the stone of the stone of the stone of the plants of the level of the stone of the stone of the plants of the plant of the stone of the stone

Frau Karl Druschki

GARDEN ROSES

The Roses suitable for cut-flower purposes are grouped under this head. They include most of the hybrids best adapted to garden culture. Abbreviations: A. B., Austrian Brier; B., Bourbon; H. P., Hybrid Perpetual; H. T., Hybrid Tea; M., Moss; T., Tea.

POTTED PLANTS

Nearly all the plants we offer this season are from 5 and 6 inch pots and in a thrifty growing condition when delivered. ROSES FOR MASSING

These "natural" or "wild" types, and the hybrids derived from them, are hardy, shrubby roses suitable for massing or hedging. The hybrids retain the vigor and hardiness of the parent species, with refinement of color and blooming qualities.

RUGOSA HYBRIDS-DORMANT PLANTS ONLY

Belle Poitevine. Very free and branching, every tip laden with immense large pink bouquets	.90	9.00
Blanc de Coubert. Flowers pure white, semi- double, fragrant	.90	9.00
Charles F. Worth. Deep crimson with carmine shadings, fairly double	.90	9.00
Conrad Ferdinand Meyer. Pure, silvery-pink, surpassing all others of the Rugosa family in beauty of color and fullness of form;		
fragrant and hardy	.90	9.00
Roseraie de l'Hay. Flowers bright red and	•••	***
intensely fragrant; free bloomer	.90	9.00 6.00
Rugosa alba. Pure white	.60	6.00

Mrs. William H. Cutbush

BEDDING ROSES

These varieties belong to the Dwarf or so-ealled Baby Rambler class. The China or Bengal roses are in this class, but our list includes only the hardier Polyanthas. (Poly.)

GERMAN IRIS

The German Iris is among the most desirable and easiest grown of our Spring-flowering hardy plants, producing in May showy flowers of exquisite coloring, combining the richest and most delicate tints. For best results plant in a well-drained, sunny position, barely covering the roots.

In the following description "S" signifies the standards, or erect petals; "F" the falls, or drooping petals.

Liatris Pycnostachya - Blazing Star

Paeony "Due de Wellington"

PAEONIES

Paeonies should be planted in rich, deep moist soil, after which they will require less attention than any other class of flowering plants. They are perfectly hardy and their remarkable freedom from disease and insects makes them most desirable. Paeonies thrive in all locations whether in the broad sunlight or partial shade.

LEXINGTON-GROWN GLADIOLI

MONG the annual and bulbous plants valuable for garden culture, the Gladiolus is becoming increasingly popular. It is useful for bordering and for massing, and blooms late in the season when bright flowers are becoming scarce; for cut-flower purposes it is unsurpassed. The simplicity of its cultural requirements is not its least important qualification. To those unfamiliar with the recent developments in Gladioli, the wonderful coloring and free, open blooms of the newer varieties will be a revelation.

We wish to renew our invitation to our friends to visit our grounds during the blooming season, in August and September, and enjoy the expanse and variety of bloom that only an immense planting makes possible. Upon request, we will send notice of the period of best bloom.

CULTURAL DIRECTIONS

Gladioli require much the same soil conditions as do potatoes, rich, yet porous, soils giving best results. Stable manure may be used for fertilizer; but commercial phosphate, sheep manure, or a mixture of ground bone and woodashes is good, the last-named being especially valuable.

Bulbs may be planted as early as the ground has dried out in spring, and plantings may continue at intervals until early July if succession of bloom is sought. Time of bloom varies from sixty-five to ninety days after planting. Set the bulbs right-side up, five or six inches deep and three to six inches apart, selecting a situation where sunlight and moisture will be plentiful. Frequent cultivation should be given during the growing season.

In the Fall, after the leaves turn brown, the bulbs should be lifted and the stalks cut off, after which they should be stored in a cool place where frost will not reach them. When they have dried, the adhering fibrous roots and shriveled "spent" corm should be torn off.

Bulbs at the single or dozen rate sent postpaid to any address.

OUR POPULAR COLLECTION

PRIMULINUS HYBRIDS

THIS new and beautiful race of Gladiolus has been produced by using the fine yellow species "Primulinus," or "Maid of the Mist," in crossing with the older existing strains. The hybrids resulting are distinguished mainly for their fine and varying shades of yellow, graceful slender stems, and airily poised and hooded flowers.

No other race of gladiolus contains such varied and beautiful tints.

DAHLIAS

THESE old-fashioned flowers have always been in favor on account of their bright colors, and their freedom of bloom under unfavorable conditions. Late developments have added such beauty and gracefulness that they are more than worthy of the increasing interest in their cultivation which is now apparent.

Their extreme variation in form and color has resulted in an almost endless assortment of named Dahlias; but careful selection reduces to a comparatively small number the sorts that are of recognized value for garden cultivation, and it is of such sorts that our collection is comprised. Type of flower is indicated after name of each.

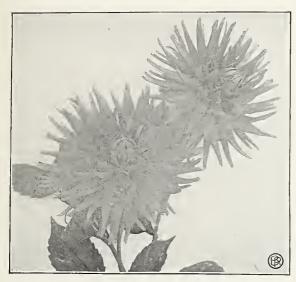

Not less than six of one variety at the dozen rate.

SPECIAL OFFER

A number of our high-class Dahlias became mixed in planting last Spring; some were listed at 50 cts. and 75 cts. each. Instead of separating them, we are offering them as they come, packed one dozen in a box, for the very low price of \$1.50 per box.

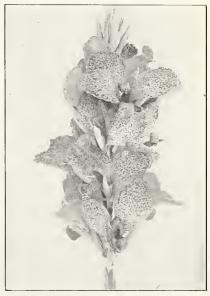

One Dozen Dahlias \$1.50

Rosea Gigantea

Yellow King Humbert

FLOWERING CANNAS

UR collection comprises many of Wintzer's greatest creations in giant orchid-flowered Cannas, all of which have won the highest awards at the world's most notable exhibitions. These new and improved forms of Cannas must be seen to be appreciated. Their brilliancy of color, perfect flower-spikes, and free blooming qualities combine to make them the most popular of flowering plants for lawn decoration. Our Canna fields when always attract must foverable compent.

fields, when in bloom, always attract much favorable comment.

Cannas thrive in any good garden soil, made rich with well-rotted stable dressing. Best results are obtained by starting the roots indoors during March or April, the plants being set out after the weather is settled and the ground warm, usually in May or June. When planting dormant roots, do not set too deep. The eye should show a little above the ground when done. Set them about 18 inches apart each way. Water sparingly the first two weeks after planting; when growing freely, water liberally. We do not furnish dormant roots after April 1st, but have a full stock of growing plants in pots ready for setting as soon as weather conditions are favorable. By setting these pot-grown plants, one secures a much longer flowering period than when dormant roots are planted. Cannas continue to bloom freely until the frost cuts them down in the late autumn, after which the roots should be lifted and stored in a dry place free from frost.

VISIT OUR NURSERIES

During midsummer and early autumn, many interesting and attractive features in and about our grounds may be found at their best. The Cannas, Dahlias and Gladioli, as well as the Roses and perennial flowers, provide a continuous profusion of bloom until heavy frosts destroy them.

Breck-Robinson Nursery Co.

Munroe Station

Lexington, Mass.

It encourages local exhibitions, and has affiliated with it many Rose societies. It supervises five Rose test-gardens—in Hartford, Ithaca, Minneapolis, Washington, and Portland. All new Roses of value are registered with it, and its Medals are highly prized as an evidence of especial merit. It fosters the hybridization of new Roses for America. Its membership includes interested rose growers and amateurs all over America.

Most of all, it issues only for its members THE AMERICAN ROSE ANNUAL, the authoritative record of American Rose progress, which is needed by every Rose-lover in America. Membership at \$3 per annum brings this fine book and other publications of the Society, with tickets to its exhibitions.
